About Us

Health Action Council represents over 230 self-funded public and private employers, union groups, and non-profit organizations across industries throughout the United States. We serve as a trusted source for employers and health benefit professionals who crave knowledge and education, desire healthy, happy and productive employees, and aim to reduce healthcare costs. We work to enhance human and economic health for them and the communities in which they reside. Health Action Council created the Healthy Kids Campaign to engage students and their families, employers, schools, and communities in promoting improved health and wellness. We've partnered with Ohio High School Athletic Association to improve health outcomes for families and communities. Through our partnerships, we promote:

What is Healthy Kids

Health Action Council created the Healthy Kids Campaign to engage students and their families, employers, schools, and communities in promoting improved health and wellness. We partner with Ohio High School Athletic Association to improve health outcomes for families and communities. Through our partnerships, we promote:

- **CHILDHOOD PREVENTABLE DISEASE VACCINATIONS**
Preventable disease vaccinations help provide children immunity to potentially life-threatening diseases. Immunization rates are at an all-time low and continue to decline.
- **WELL-CHILD VISITS**
Regular doctor, dental, and vision visits ensure kids are developing properly and receive ongoing preventive screenings.
- **KEEPING KIDS ACTIVE**
Maintaining an active lifestyle such as playing outside and participating in sports helps children ward off chronic illness and build resiliency at a young age.
- **NUTRITION**
Healthy eating supports brain development and growth and boosts physical and mental health for children.
- **HEALTH LITERACY**
Helping families understand the importance of healthy choices and smart healthcare utilization will aid in improved access to care and health outcomes.

In each of these areas, early action makes a difference in a child's health!
Healthy children are more likely to become healthy adults.
